GENERAL SPECIFICATION FOR ROADS AND BRIDGES

PREFACE

Brunei Darussalam is a fast developing country. Infrastructure needs such as roads and bridges are continually expanding. The network of roads in Brunei Darussalam, in relation to its land mass and population, is one of the most extensive and finest in this part of the world.

Authority for the planning and implementation of the road network is vested in the Public Works Department, Ministry of Development. A consistently high standard of design, construction and maintenance is a standing objective of the Public Works Department. Towards this objective, it is necessary for a uniform set of specification to be developed and used by consultants and contractors alike.

The specification and guideline published by the Construction Planning and Research Unit (CPRU), Ministry of Development, are based on established and current practices in this region. They are further modified to suit the conditions peculiar to Brunei Darussalam.

Throughout the specification, there are references to standards and tests of the British Standard (BS), Code of Practice (CP) of the United Kingdom; American Association State Highway and Transportation Officials (AASHTO), American Society for Testing and Materials (ASTM), United States of American; and these shall mean the latest issue of these standards and practices.

The specifications contained here from part of the General Specification for Roads and Bridges developed and compiled by CPRU. They will be continually updated or amended to keep abreast of changes and modern advances in construction technology and materials.

COMMITTEE REPRESENTATION

The Technical Committee on General Specification for Road Furniture was entrusted by the Ministry of Development for the preparation of this Brunei Darussalam Standard. The members of the Technical Committee are as follows:-
